lucas-rudd commented on Sep 25, 2018

I believe this may be an issue with the `magic` package used by `thehive4py/api.py`

After installing elastalert v 0.1.3.6 I get the following stacktrace when I try to run an elastalert test with a folder of rules

Traceback (most recent call last):
 File "/home/elastalert/.local/bin/elastalert", line 11, in <module>

This worked for me:

```
pip uninstall python-magic
pip install python-magic-bin==0.4.14
```

👍 453 👎 32 😄 46 🎉 104 ❤️ 100 🚀 66 🙄 13

Isoumille commented on Sep 27, 2018

@synhershko Your solution doesn't work for me because python-magic requirement is >=0.4.15. Here is the error message:

```
pkg_resources.DistributionNotFound: The 'python-magic>=0.4.15' distribution
was not found and is required by elastalert
```

👍 3

primeroz commented on Oct 1, 2018

I just installed libmagic and it fixed that error. I am running an alpine container

👎 6 🚀 2

eliasbrange commented on Oct 5, 2018

+1. Our elastalert suddenly started failing in our CI due to libmagic not being installed. Might want to add it to the docs that it is required. Even better, don't try to import it unless a `Hive` rule is configured.

wuxinwei commented on Oct 23, 2018

+1. I got the same problem when I was run elastalert at alpine container

wuxinwei commented on Oct 23, 2018

@primeroz , Can you tell me that how do you solve this problem, just install libmagic when build docker image?

eliasbrange commented on Oct 23, 2018

@primeroz , Can you tell me that how do you solve this problem, just install libmagic when build docker image?

We've just added `apk add libmagic` .

👍 19 🚀 2

primeroz commented on Oct 23, 2018

@wuxinwei as **@eliasbrange** mentioned just `apk add libmagic`

wuxinwei commented on Oct 24, 2018

@eliasbrange ,thank you, the solution which you mentioned solved my problem

Samuel-Gong commented on Nov 2, 2018

Do we have any workaround or solution for this issue?

Check out <https://github.com/pidydx/libmagicwin64> for installing libmagic on windows.

I have downloaded all 4 files which are mentioned in the above link and placed under C:\Windows\System32.. But when I try to import magic or import liblogic, its giving same error.

```
import magic
Traceback (most recent call last):
File "", line 1, in
File "D:\Python27\Lib\site-packages\magic.py", line 181, in
raise ImportError('failed to find libmagic. Check your installation')
ImportError: failed to find libmagic. Check your installation
import libmagic
Traceback (most recent call last):
File "", line 1, in
ImportError: No module named libmagic
```

Do we need to run/configure any thing after download those 4 files?

we have python 32bit on windows 2012 64 bit

```
platform.architecture()
('32bit', 'WindowsPE')
```

MickaelHUMPHREYS commented on Mar 19, 2019

Hi,

I had the same problem.
I solved it by adding this requirement : python-magic
pip install python-magic==0.4.15

Ogagnon commented on Jul 20, 2019

This worked for me:

```
pip uninstall python-magic
pip install python-magic-bin==0.4.14
```

I love you.

I have the same issue (Linux mint), I tried to remove magic by this command:
pip uninstall python-magic
and then reinstall, but it didn't work.
What I did in the end: I cloned the github code: <https://github.com/ahupp/python-magic>
into the local folder to the directory where the actual project is, and then renamed the folder to 'magic'. After that it worked.

lobinator commented on Oct 5, 2019

This worked for me:
pip uninstall python-magic
pip install python-magic-bin==0.4.14

Worked for me too. Note that I uninstalled libmagic in addition to python-magic.

roykingtree commented on Oct 10, 2019

neither solution worked for me

When I run `pip uninstall python-magic` and then `pip install python-magic-bin==0.4.14` I get the error message: `ERROR: Could not find a version that satisfies the requirement python-magic-bin==0.4.14 (from versions: none) ERROR: No matching distribution found for python-magic-bin==0.4.14` . Has anyone else seen this error?

same, bro

rtviii commented on Jun 5, 2023

In my case (M1 MacBook), it was all about telling the system where to find the library files. So after obvious `brew install libmagic` (on M1s, homebrew installs `libmagic` to `/opt/homebrew/Cellar/libmagic`), it was necessary to create a symbolic link from the library files to the place where the system expects `libmagic` to be located, which is `/usr/local/lib` .

Therefore, this worked for me:

```
sudo ln -s /opt/homebrew/Cellar/libmagic/5.41/lib/libmagic.dylib /usr/local/lib/libmagic.dylib
```

FYI: my version of `python-magic` is `0.4.18` (and I wasn't willing to downgrade as suggested above)

savior

spam0115 commented on Jun 29, 2023

None of these solutions are working for me in windows. Tried installing libmagic, tried 1. `pip uninstall python-magic`

2. `pip install python-magic-bin`, tried the windows libmagic dll prebuilts. No change

local/lib/libmagic.dylib
```

FYI: my version of `python-magic` is `0.4.18` (and I wasn't willing to downgrade as suggested above)

This worked for me (M2 pro). Just make sure you use the correct version inside the `/opt/homebrew/Cellar/libmagic/` .

Hello everyone, after having a lot of issues with it, the solution that worked for me was to use the following commands (use python_magic_bin without version):
python-magic==0.4.27
python_magic_bin

It downloads python-magic-bin==0.4.14 but if I mention the version, it doesn't work. Strange behavior.

tomtastic commented on Sep 9 • edited

MacOS (maybe others too)

```
$ pip install pylibmagic
$ pip install python-magic

Then ensure you import pylibmagic before you import magic
```

pip install python-magic
```

I'm on Apple M2 Max.

denivic commented on Oct 2

Not specifying the version for `python-magic-bin` worked for me (Windows):

```
pip uninstall python-magic
pip install python-magic-bin
```

mburaksayici commented on Nov 1

MAC M1/M2 People,
This should work, and please note this solution because when you restart terminal,
python related things in Mac somehow restarts, you probably faced that

<https://stackoverflow.com/a/79042514/6806531>

```
brew install libmagic

pip uninstall python-magic
pip install python-magic

# comma separated list for --find-links
export PIP_FIND_LINKS=https://github.com/ddelange/python-magic/releases/
expanded_assets/0.4.28.post7
pip install --force-reinstall python-magic
```

Also within the codebase, use that:

```
`
mime = magic.Magic(mime=True, magic_file = "/usr/local/Cellar/libmagic/5.45/share/
misc/magic.mgc") # For local test on mac : mime = magic.Magic(mime=True,
magic_file = "/usr/local/Cellar/libmagic/5.45/share/misc/magic.mgc")
file_type = mime.from_buffer(file_bytes)
`
```

You can findyour magic.mgc file by

```
brew list libmagic
it's in share/misc/magic.mgc
```
